

## Bathroom cabinet shelf retainers

When you open the cabinet door there is nothing to keep the contents from falling out. If you open it with the toilet lid up you know where stuff will land! I installed the expandable rods that are used in RV refrigerators but stuff still slipped over or under them so I decided that a better solution was in order.

I built retainers out of 1/8" Plexiglas. It was easy to cut the pieces to size on a table saw with a fine blade. I used a bench grinder to fit them for each shelf.

I used 3M VHB tape to secure the Plexiglas to the cabinet after cleaning all surfaces with rubbing alcohol. Here is the finished project
